- Normalized Impact higher than Max Planck average
- Normalized Impact higher than German average
- Normalized Impact lower than German average

We have highlighted IC, NI and Q1 values for MPIs having a scientific production lower than 100 documents published during the analyzed period. These values must be studied carefully, since such small figures can lead to trivial conclusions with extremely low statistical significance.

**Disclaimer notice:**  
 This ranking IS NOT A LEAGUE TABLE. The ranking parameter – the scientific output of institutions-- should be understood as a default rank, not as our ranking proposal. The only goal of this report is characterizing research outcomes in order to provide useful scientometric information to the institutions, policymakers and research managers so they are able to analyze, evaluate and improve their research results. If someone use this report to rank institutions or to build a league table with any purpose, will do it under his/her own responsibility.
